POSTDOCTORAL POSITION IN RANDOM MATRIX THEORY

Applications are invited for a postdoctoral position in the area of random matrix theory and its applications in particle physics, statistical mechanics and mathematics. The successful applicant will work in the Mathematical Physics group of Professor Gernot Akemann at the Department of Physics, Bielefeld University, Germany.

The appointment is for a fixed-term two-year contract and will normally start in spring 2016, with a later date being possible. Prerequisite is a PhD or equivalent in Theoretical Physics or Mathematics, preferably related to random matrix theory. The salary will be approximately 50.000 Euro per annum.

The position is funded by the German Research Council DFG through the individual grant entitled "Products of Random Matrices: From New Results to Applications". Well established links exist to the High Energy Physics group and to the Faculty of Mathematics in Bielefeld. Together with the Probability Theory and Mathematical Statistics group of Professor F. Götze we regularly organise joint research seminars, workshops and summer schools and share a lively visitor programme.

Applications should include a curriculum vitae, a list of publications, and a brief description of research interests. The applicants should arrange for at least two letters of recommendation to be sent directly to

Ms. Hannelore Litschewsky
