Highlights

- Dr. Petr Dementyev granted with Liebig-Stipendium

- "Wie schnell expandiert das Weltall?" Prof. Dominik Schwarz schreibt in Spektrum der Wissenschaft (German)

- Physicist Mark Schüttpelz receives Tycho-Jæger Prize

- Gender Professorship at Faculty of Physics and BINAS since SS2018
- Largest molecular spin found close to a quantum phase transition

- DFG Research Unit 2692 *Fundamental Aspects of Statistical Mechanics and the Emergence of Thermodynamics in Non-Equilibrium Systems* funded
- Healthy aging: New EU project on the human liver

- Spin current from heat: new material increases efficiency

- Dancing electrons loose the race

- Collaborative Research Center TransRegio of the Theoretical High Energy Physics Group in collaboration with University Frankfurt and TU Darmstadt funded
• Healthy aging: New EU project on the human liver - Bielefeld University to coordinate programme with partners from nine countries.

• Chip-based nanoscopy: Microscopy in HD quality - New invention at Bielefeld University and the University of Tromsø (Norway)

• Optical tractor beam traps bacteria-Physicists from Bielefeld University report on new methods in ‘Nature Communications’
Physicists find new explanation for key experiment - Researchers at Bielefeld University publish findings on spin caloritronics and are the first to apply measurement methods in the field.

Hot electrons point the way to perfect light absorption - Physicists study how to achieve perfect absorption of light with the help of rough ultrathin films.

Filtering pollutants with nanomembranes - Bielefeld University participating in two European research networks.

Cooling with molecules - Researchers at the universities in Bielefeld, Manchester, and Zaragoza present low-temperature experiment in Nature Communications.
