

# Topics in RMT - Table of content

Chapter 1: Non-Hermitian RMT	1
- Ginibre Ensemble, Schw decay	1
- Wigner, normal, elliptic Ginibre	3
Determinantal point processes and orthogonal polynomials on $\mathbb{C}$	4
Cram-Sciencio, kernel & normalisation	5
Kernel and OP as char. polynomials	6
Properties of OP on $\mathbb{C}$	7
Example Hermite/induced Ginibre	8
Dyson's theorem	9
W pair correlation functions	10
dist. of radii, permanents	11
W-ke eigenvalue and gap probabilities on $\mathbb{R}$	14
Fredholm-det representation and generating function on $\mathbb{R}$	15
Radii gap probability on $\mathbb{C}$ and Fredholm det rep.	17
Andriief integration formula	18
Distribution of smallest eigenvalue in radius	18
Spacing distribution on $\mathbb{R}$ and $\mathbb{C}$ (orig)	21
Chapter 2: Products of Gaussian random matrices	22
Generalised Schur decomposition	23
Jacobian for $m=3$	25
Mittag-Leffler function	26
properties of $u_n$ : moments, recursion, multivariate- $\delta$ rep	27
Mittag-Leffler for solving the recursion	28
Complex eigenvalue correlation functions	29
Distribution of radii and hole probabilities	30
Product of $m=2$ coupled matrices and Laguerre polynomials on $\mathbb{C}$	30
Relation to Dirac operator, 2 independent matrices	31
Kernel of Laguerre OP on $\mathbb{C}$	32
Chapter 3: The large- $N$ limit in non-Hermitian RMT	32
Comparison to Hermitian RMT, local vs global	33
Large- $N$ of Ginibre: naive = saddle approx	34
Circular law	35
Edge-limit to etc, Ginibre	36
Universality of elliptic Ginibre and Melis-formula	37
Weak non-Hermiticity limit and its kernel	39
Large- $N$ for products of $m$ indep. Ginibre matrices	40
global regime, hypergeometric kernel and edge limit	41
Density of a single Ginibre matrix to power $m$	41
Chapter 4: Integrals over the unitary group - an overview	41
Hartsh-Orandna-Itzykson-Zuber, Leutwyler-Smitga	42
Berezin-Kupelovich, character expansion (idea)	43
Application multi-matrix models: singular values of products of random matrices	44
Example $m=2$ , bi-orthogonal polynomials and polynomial ensembles	46
The classical Hermitian 2-matrix model with Itzykson-Zuber coupling: jpdf	47
