Aktuelle Veranstaltungen

Kolloquium

Thema: tba
Datum: 08.06.20
Uhrzeit: 16:15
Ort: H6

Vortragender: Prof. Dr. Tetyana Galatyuk
TU Darmstadt

Inhalt:

Ansprechpartner: F. Karsch/TR211

Kolloquium Mathematische Physik

Thema: Numerics for resonances of Schottky surfaces
Datum: 10.01.20
Uhrzeit: 16:15
Ort: V3-201

Vortragender: Anke Pohl
Universität Bremen
Resonances of Riemannian manifolds are of great importance in many areas of mathematics and physics. Even though many fascinating results about these spectral entities have already been found, an enormous amount of their properties, also some very elementary ones, is still undiscovered. A few years ago, by means of numerical experiments, Borthwick noticed for some classes of Schottky surfaces (certain hyperbolic surfaces of infinite area) that their sets of resonances exhibit unexpected and nice patterns, which are not yet fully understood. After a survey of some parts of this field, we will discuss an alternative numerical method, combining tools from dynamics, zeta functions, transfer operators and thermodynamic formalism, functional analysis and approximation theory. This is joint work with Oscar Bandtlow, Torben Schick and Alexander Weiße.

Seminar Hochenergiephysik

**Chiral charge dynamics in Abelian gauge theories at finite temperature**

**Thema:**

**Datum:** 18.02.20

**Uhrzeit:** 15:15

**Ort:** D6-135

**Vortragender:** Adrien Florio

EPFL Lausanne

The chiral anomaly present in the standard model can have important phenomenological consequences, especially in cosmology and heavyions physics. In this talk, I will focus on the contribution from the Abelian gauge fields. Despite an absence of topologically distinct sectors, they have a surprisingly rich vacuum dynamics, partly because of the chiral anomaly. I will present results obtained from real-time classical lattice simulations of a U(1) gauge field in the presence of a chiral chemical potential. They account for short distance fluctuations, contrary to effective descriptions such as Magneto-Hydrodynamics (MHD). I will discuss various phenomena, like inverse magnetic cascade, which occur in this system. In particular, in presence of a background magnetic field, the chemical potential exponentially decays. The associated chiral decay rate is related to the diffusion of the Abelian Chern-Simons number in a magnetic background, in the absence of chemical potential. The rate obtained from the simulations is an order of magnitude larger than the one predicted by MHD. If this result is shown to be robust under corrections such as Hard Thermal Loops, it will call for a revision of the implications of fermion number and chiral number

The associated chiral decay rate is related to the diffusion of the Abelian Chern-Simons number in a magnetic background, in the absence of chemical potential. The rate obtained from the simulations is an order of magnitude larger than the one predicted by MHD. If this result is shown to be robust under corrections such as Hard Thermal Loops, it will call for a revision of the implications of fermion number and chiral number non-conservation in Abelian theory at finite temperature.
Seminar AG Zufallsmatrizen

Thema: TBC - 27 May 2020, 0900 hrs

Datum: 27.05.20

Uhrzeit: 09:00

Ort: ZOOM / Konferenzschaltung

Vortragender: Mario Kieburg

University of Melbourne

Inhalt: TBC

Ansprechpartner: Gernot Akemann
